

I am a professional truck driver and xm satellite subscriber. i very much enjoy the variety and quality of programing offered and would hate to loose any part of it. With all the news and info stations they offer i can keep up to date on all the current events without stations fading out and having to station surf like in the past. The traffic and weather stations are a great help and i just cant see why the Natl Assoc. of Broadcasters is seeking to stop it.I respectfully urge the FCC to reject NABs petition 04-160 and support XM ability to provide the type of programing that i need and deserve.

Thank You

Thomas
